

# GMAP2D-GIS

"A picture is worth a thousand words"

Arthur Brisbane

A Geographic Information System (GIS) combines data, software, and maps, to display information based on its geographic relevance.

There are endless possibilities digitally manipulating data and presenting them in multiple ways, but the main goal of a Geographic Information System is to provide information to support a decision making process at the blink of an eye. That is why **GMAP2D-GIS** is the perfect platform for extreme efficiency and affordability.

**GMAP2D-GIS** uses a color scale to group and highlight different indicators to visually show points of interest and allow visualizing data into information.

**GMAP2D-GIS** provides full detailed information from multiple indications for every geographic coordinate.

**BINNACLE**  
CONSULTING GROUP

2201 Cooperative Way  
Suite 600  
Herndon, VA 20171

## FEATURES

- World-wide mapping
- Easy to use
- Online Platform
- SAAS Solution
- Simultaneous Users
- Multiple Indicators
- Access to realtime databases

## APPLICATIONS

- Financial Models
- Traffic Management
- Education Goals
- Crime Monitoring

Expert talent at your service
